

Eyelash After Care

■ Do not expose B-Lashes Eyelash Extensions to water for 12-24 hours after the application. If washing the face, use care and avoid splashing water or cleanser in the eye area. Do not swim, shower, use hot tubs, or steam rooms, for the first 12-24 hours.

■ Avoid contact between moisturizers, eye creams, or makeup removers and the B-Lashes Extension. Any cosmetic product, cleanser containing glycols or organic solvents should be avoided. Products such as these can potentially break down the adhesive bond and shorten the duration of time the extensions stay on. Products with high concentrations of alcohol should also be avoided.

■ Curling of B-Lashes Eyelash Extension is not recommended. Because the extensions come pre-curved, additional curling is not necessary and doing so may shorten the lifespan of the extensions by compromising the adhesive bond.

■ Avoid rubbing your eyes or pulling on your extensions. Any action which repeatedly puts stress or strain on your B-lashes Eyelash Extensions and will cause them to come off prematurely.

Visit your technician for touch-ups every 3 -4 weeks.
